Our renovation of the Head Garage with Page Building Construction Company is proceeding pretty much on schedule. Recent bitter cold weather has slowed down completion of the carbon fiber reinforcement for the corners of the inside foundation, but that should be concluded in the next week.

Concrete supports for the elevator and steel beams that will support the weight of the upper floors have been poured.

Masons continue to work on repairing the block walls on the first floor, strengthening and resizing the openings for new windows and doors.

Architect’s rendering of new building set on existing site.

The leaching field for the septic system has been excavated, and the concrete septic tanks have been installed behind the building. Although the building will have environmentally safe composting toilets, state regulations required us to put in a Title 5 system. Our waste water will only be gray water from the kitchen, bathroom and utility sinks.

Activities upcoming:

Plans are coming together for the layout and outfitting of our public space on the first floor. After the foundation work is complete, the new concrete floor will be poured. Bracing is in place for roof replacement. Things will really start moving along during February.

We will keep you updated as the project progresses. Thank you for all your support and encouragement!
